Total for UT HSC-Tyler \$ 47,000,000.00

UT MB-Galveston

601-949 Health Education Center \$ 91,595,000.00

Total for UT MB-Galveston \$ 91,595,000.00

Total for Health Institutions \$ 158,595,000.00

Total for Major Construction \$ 169,595,000.00

FY 2019-2024 Capital Improvement Program
Summary of CIP Changes the Past Quarter - 5/23/19

Austin	102-1219 Sarah M. and Charles E. Seay Building Addition	Add project to CIP with a total project cost of \$20,000,000 with funding of \$18,000,000 from the Available University Fund and \$2,000,000 from Designated Funds (BOR 05/23/19)
	102-782 DKR - TMS - South End Zone Addition and Stadium Maintenance and Renovation	Approve a revision in funding sources by decreasing Gifts from \$125,000,000 to \$40,000,000 and increasing Revenue Financing System Bond Proceeds from \$50,000,000 to \$135,000,000 with total project cost of \$175,000,000 unchanged (EVC Leslie 02/26/19)
El Paso	201-942 Interdisciplinary Research Building	Approve an increase in total project cost from \$85,000,000 to \$93,500,000 with additional \$8,500,000 in funding from Revenue Financing System Bond Proceeds (Chancellor Memo 03/13/19)
SWMC	303-1183 Radiation Therapy Building Phase II	Add project to CIP with a total project cost of \$69,154,000 with funding of \$54,154,000 from Revenue System Financing Bond Proceeds and \$15,000,000 from Designated Funds (BOR 05/23/19)
San Antonio	401-1173 Guadalupe Hall	Approve design development with a total project cost of \$43,600,000 with funding of \$38,600,000 from Revenue System Financing Bond Proceeds, and \$5,000,000 from Designated Funds (BOR 05/23/19)

102-1049 Applied Research Laboratories - New Office Building

The University of Texas at Austin

Individual Project Summary

Project Description

The Applied Research Laboratories complex located at the Pickle Research Campus is at capacity and limits anticipated workload and growth. The proposed project will provide needed additional office and work space in a three-story building located adjacent to and connected with the existing building. This project will also include replacement and expansion of existing utility equipment and infrastructure necessary to support the new building and provide reliable service to the rest of the campus.

102-1172 Marine Science Institute Rebuild

The University of Texas at Austin

Individual Project Summary

Project Description

The proposed project is intended to bring the Institute up to full operation as quickly as possible by replacing damaged roofs and mechanical systems. Various rebuilding projects will continue across the Institute including interior and exterior restoration of numerous buildings, rebuilding of the pier, and replacement of student housing.

102-1219 Sarah and Charles Seay Building Addition

The University of Texas at Austin

Individual Project Summary

Project Description

Construct a 32,700 GSF addition to the Sarah M. & Charles E. Seay Building (SEA) on The University of Texas at Austin campus to support the Department of Psychology, Institute for Mental Health Research and Center for Perceptual Systems. This will provide office and lab space for current and future researchers and their programs.

102-282 Welch Hall Renovation

The University of Texas at Austin

Individual Project Summary

Project Description

Robert A. Welch Hall is a multi-use facility that houses ten lecture halls, undergraduate and graduate administrative offices, laboratories, and classrooms associated with the Mass Spectrometry, NMA Spectroscopy, ESA Spectroscopy, Chemistry, and Biochemistry departments. In addition, a large greenhouse is located on the roof of the southeast corner. The building was constructed in three phases: the original 1929 wing, the West Wing built in 1961 and the 1978 Wing.

The building suffers from a long list of problems, including: outdated MEP systems in most of the building, aging equipment, inefficient lab layouts, inflexible lab and building services, lack of separation between classroom and research spaces, integrity failures of various exterior wall and roof surfaces, and life safety and security concerns.

The University commissioned a study to look at how the building might best be used in the future. That study provided valuable information, but more work and analysis is necessary before we make final decisions on the adaptations the building will require in order to continue to function as a major science facility for the campus.

102-649 McDonald Observatory FLS and Infrastructure Upgrades

The University of Texas at Austin

Individual Project Summary

Project Description

The need for this project was triggered by 2011 West Texas wildfires, which came close to the McDonald Observatory. Analysis determined that existing systems were inadequate to meet mandated fire water supply and flow demands in the event of a future fire event. To date, the project tasks that have been completed include the wastewater system, test well investigations, two permanent wells, and the design of the system's storage and distribution infrastructure. Additional project funds were obtained in 2016 to install equipment and infrastructure in the lower valley area of the Observatory. The proposed increase will allow the project to extend the water supply infrastructure to the full Observatory site.

Original project funding proved insufficient as actual construction costs came in higher than estimated. The remoteness of the site and increased construction activity in the area have contributed to higher construction costs and additional filtration equipment was necessary to meet allowable limits required by the Texas Commission on Environmental Quality. The completion of this infrastructure installation is critical to provide a locally managed and sustainable public water supply and fire protection system to the full Observatory site.

102-692 Jester West Maintenance and Interior Finishes

The University of Texas at Austin

Individual Project Summary

Project Description

The project will renovate each floor of the Jester West tower, from the ground floor through the 14th floor, phased in over six years. The existing built-in student room furniture will be removed and replaced with new movable furniture in each student room. Finishes will be upgraded throughout and are repetitive on each floor. Additional upgrades include improvements and replacement to portions of the plumbing, electrical and mechanical systems, and an exterior curtain wall will be added at the termination of long corridors to add more natural light on the floors in a manner similar to the successfully completed Jester East Maintenance and Interior Finishes project.

102-719 Robert B. Rowling Hall

The University of Texas at Austin

Individual Project Summary

Project Description

The University of Texas at Austin plans to build a new 198,383 GSF/118,188 NASF academic building, Robert B. Rowling Hall, for the McCombs School of Business to house the Graduate School of Business. In addition, the project scope will include an approximately 88,854 GSF/52,935 NASF expansion of the AT&T Executive Education and Conference Center in order to further strengthen the ability of the conference center to support the McCombs Executive Education programs. A parking garage (217,939 GSF/192,377 NASF) with 400 spaces is also included in the program. The parking spaces will support the new Robert B. Rowling Hall, the conference center expansion and campus. The project is scheduled to begin construction in December 2014.

102-853 Energy Engineering Building

The University of Texas at Austin

Individual Project Summary

Project Description

The Energy Engineering Building will provide approximately 184,300 gross square feet of critically needed education and research space for the Cockrell School of Engineering. The project will be located where W.R. Woolrich Labs (WRW) currently resides. The project is central to achieving the Cockrell School of Engineering's vision to be a globally recognized leader in multidisciplinary innovation dedicated to solving the pressing societal problems of the 21st century and beyond, driving future economic progress, and improving the quality of life. Through modular laboratories and integration of undergraduate education, graduate research, and co-location of research and education programs, this project will bring a new paradigm for energy engineering education and research to the university.

102-926 Graduate Student Housing Complex

The University of Texas at Austin

Individual Project Summary

Project Description

The University of Texas at Austin seeks to construct new on-campus housing for graduate students. These housing units will be used as part of an incentive package to attract high quality graduate students by providing a guaranteed place to live for a set length of time, close to where they'll study and work with faculty. This will allow graduate departments on-campus to better recruit and retain top graduate students for their programs. As envisioned in The University of Texas at Austin East Campus Master Plan to be presented at the May Academic Affairs Committee meeting, graduate student housing will be added in multiple phases. Total area of is expected to be approximately 343,000 gross square feet and provide a combination of micro-studio living units, one bedroom units, and two bedroom units allowing approximately 747 graduate students to be housed in this project. As part of the East Campus Master Plan, the design of these graduate student housing units will conform to the needs of graduate students and be built in a way which is sympathetic to and compatible with the private residential community located nearby.

The University of Texas at Dallas

Individual Project Summary

Project Description

This project is a 187,237 square foot, multi-story building that would contain classrooms, laboratories, offices and support space primarily for mathematics and physics and the UTeach program. This Science Building will provide efficiently designed space to support the optimal productivity of the faculty and staff of UT Dallas, particularly in the Departments of Physics and of Mathematical Sciences as they carry out their teaching, advising, and research activities. The Science Building will accommodate growth for 1,750 additional students, 50 tenured and tenure-track faculty members, 20 senior lecturers, and additional research funding of \$7,500,000 per year.

201-1181 Sun Bowl Stadium Repairs and Modernization

The University of Texas at El Paso

Individual Project Summary

Project Description

The Sun Bowl Stadium was constructed in 1963 and was expanded in 1983. This proposed project allows for structural repairs to the upper section of the stadium west stands; address Americans with Disabilities Act (ADA) seating access and dispersion requirements; remodel existing restrooms as required by current codes; and modernize the existing press box. These repairs are necessary to extend the useful life and improve operational efficiency of the facility. This project is included in the institution's Strategic Plan and conforms to the current approved Campus Master Plan as an asset to be maintained.

501-918 Kinesiology Building

The University of Texas Permian Basin

Individual Project Summary

Project Description

This project calls for the construction of a new 63,717 gross square foot (43,976 assignable square foot) Kinesiology Building on UTPB's main Odessa campus. The new building will be centrally located between the practice football field and the intramural field. The Institution will be adding a new parking lot adjacent to the new Kinesiology Building which will serve the new building and the practice field. The project also includes the construction of a pedestrian bridge over an existing drainage swale.

The new building will house the Kinesiology Department's classrooms, faculty offices, and labs (biomechanics, athletic training clinicals, and psychology and exercise physiology) for Kinesiology and Athletic Training majors. With the addition of athletic gifts and grants, the building will also contain an expanded weight room (shared between Kinesiology and Athletics), a Team Meeting/Lecture Hall, new locker rooms for football and women's soccer, an equipment/laundry area, and coaches offices. The building will be one-story in height, and will serve as a focal point for entrance to the UTPB campus from 42nd street. It also provides a pedestrian connection between the existing gymnasium and the fields, as well as a pedestrian connection to the practice field.

903-1159 School of Medicine Team Based Learning Center

The University of Texas Rio Grande Valley

Individual Project Summary

Project Description

The proposed project will be an extension of the existing Medical Education Building located on the Edinburg Campus. This facility is necessary to accommodate current and expected growth in the School of Medicine while maintaining the mission of the school as a catalyst for education in health care. The building will house faculty and administrative offices, small group study spaces for the growing medical student population, flexible and general purpose classrooms, conference rooms, and support spaces.

The University of Texas at San Antonio

Individual Project Summary

Project Description

U. T. San Antonio (UTSA) seeks to construct a new 80,000 gross square feet (GSF) facility, to be named the National Security Collaboration Center (NSCC), in downtown San Antonio as part of the distributed downtown campus. The NSCC will provide an additional 52,000 assignable square feet to the U. T. San Antonio campus. Subject to further program development, the proposed facility is expected to provide 10,400 ASF of computational technology laboratories (cyber range, visualization, high-performance and cloud computing, and machine learning), 10,400 ASF of office and research laboratory space for two existing computational research centers: (1) the Cyber Center for Security and Analytics, and (2) the Center for Infrastructure Assurance and Security, 10,400 ASF of leasable space for industry partners and a U. T. San Antonio-managed technology incubator, and 15,600 ASF for federal research laboratories managed by the National Security Agency, U.S. Army Research Laboratory, United States Secret Service, the Federal Bureau of Investigations, and other agencies. An additional 5,200 ASF will be dedicated for a Sensitive Compartmented Information Facility (SCIF) to conduct classified research with federal and industry partners. The NSCC will provide both virtual resources and physical capabilities to enable Government-University-Industry (GUI) partnerships for cutting edge basic and applied research, rapid prototype development, and transition of advanced computational technologies to strengthen national security and global defense.

802-947 College of Business

The University of Texas at Tyler

Individual Project Summary

Project Description

The new College of Business and Technology Building will be located on a heavily wooded site along the south end of campus at the intersection of University Boulevard and Lake Drive. A 302 car parking structure is planned directly to the west of the new building. This site allows for growth opportunity and can accommodate a second phase building project in the future.

The goal of this project is to enable growth for both colleges by relocating the CBT out of the current 50,000 gross square foot Business Building into a new 141,213 gross square-foot building. The College of Arts and Sciences will take over the existing building after the CBT vacates the building, allowing a renovation of the existing Business Building. The new building will require a 500 ton chiller be added to the south plant to accommodate the increased cooling load. A parking garage will consist of a ground level and two elevated decks to accommodate approximately 302 vehicles in 104,760 gross square-foot open structure.

303-1035 William P. Clements Jr. University Hospital Expansion

The University of Texas Southwestern Medical Center

Individual Project Summary

Project Description

The proposed expansion to the William P. Clements University Hospital (CUH) continues UTSWMC's goal to bring together innovative hospital design, state-of-the-art technology, and industry best practices to create an environment that seamlessly integrates patient care with leading-edge research and medical education. Opening of the CUH, December 6, 2014 has led to unprecedented growth across entire clinical platform - medical and surgical specialty cares in cardiovascular disease and cancer, emergency department and Zale Lipshy University Hospital with emphasis on Neuroscience programmatic growth and across entire clinical enterprise. The proposed \$480 Million project includes adding a third tower, expanding the Emergency Department, adding additional operating rooms and interventional suites, constructing two new parking structures and moving existing services at Zale Lipshy University Hospital to the new tower. Expansion consolidates all inpatient services in one facility and improves the quality of hospital care and services, lowers cost of care by eliminating redundancies in infrastructure, staffing and inventory, and positions UTSWMC as a destination high-acuity hospital in the region, and prepares UTSWMC for future referrals from growth of Southwestern Health Resources network.

303-1183 Radiation Therapy Building Phase II

The University of Texas Southwestern Medical Center

Individual Project Summary

Project Description

The second phase of the expansion of the William P. Clements Jr. University Hospital ? Harold C. Simmons Comprehensive Cancer Center Radiation Oncology expansion project (Radiation Oncology Building Phase II) continues UTSWMC's goal to meet the changing health care challenges to develop and implement new models of care delivery through improved patient access and operational efficiency. Phase II is essential for Radiation Oncology's long-term sustainability and continues UTSW's East Campus Master Plan. Opening of the Radiation Oncology outpatient facility in April 2017 has resulted in 2,890 unique patients treated in FY17, a 796 (cumulative growth of 53%) increase in the originally projected 2,094 expected growth. The project scope includes a seven (7) vault, 70,700 square foot radiation oncology facility.

303-948 Vivarium and Research Infrastructure Reinvestment

The University of Texas Southwestern Medical Center

Individual Project Summary

Project Description

This project will include vivarium additions and renovations of approximately 295,000 GSF on the South and North Campuses in order to increase overall animal research capacity. A portion of this project will create modern academic faculty space, teaching facilities, and biomedical laboratories. The expected life of the renovated space is between 20 and 30 years. The need for facilities requiring these special environmental conditions has more than doubled between 2007 and 2014. Without additional vivarium capacity future research growth at UT Southwestern will be severely constrained. Design Development plans and authorization of expenditure of funding for the repair and rehabilitation portion of the project will be presented to the President for approval at a later date. Design Development plans and authorization of expenditure of funding for any new construction portions of the project will be presented to the Board for approval at a later date. Includes utility tunnel and infrastructure repairs on South Campus and replacement of existing 125 MMBTU boilers at the South Campus Thermal Energy Plant.

601-1093 League City Campus Expansion 2017

The University of Texas Medical Branch at Galveston

Individual Project Summary

Project Description

The League City Campus Expansion 2017 is aligned with the U. T. Medical Branch - Galveston League City Master Plan. Phase 1 of this expansion project consists of construction of a parking garage, multiuse support building, and a pedestrian bridge. Phase 2 will include 60 new beds, diagnostic/ancillary space, and finish out of six additional beds in existing shell space in the League City Hospital, increasing the total League City Campus in-patient capacity from 31 to 97 beds. This will meet the current and projected demand and includes the addition of acuity adaptable rooms and space to accommodate essential services to support expanded inpatient and emergency room volume. The acuity adaptable beds will support ICU care for U. T. M. D. Anderson Cancer Center and U. T. Medical Branch patients.

Phase 2 of this project also includes the Permanent University Fund (PUF) funded Academic and Patient Care Center (APCC). The APCC will include a telehealth/teleconference center for joint use by U. T. Medical Branch and U. T. M. D. Anderson Cancer Center, a radiation treatment component for U. T. Medical Branch patients, and a small business center to support the clinical research activities of both institutions.

601-860 John Sealy Hospital Ph 2 Modernization and Facade Replacement

The University of Texas Medical Branch at Galveston

Individual Project Summary

Project Description

The proposed project will combine Phase 2 of the John Sealy Hospital Modernization and the previously approved scope of the John Sealy Hospital Facade Replacement into one project to minimize disruption to patient care by vacating an entire wing of the building and completing the exterior facade replacement and interior modernization simultaneously. The project consists of modernizing 220,000 gross square feet of the John Sealy Hospital and creating a women's center with labor and delivery suites, patient rooms, neonatal ICU, well-baby nursery, operating rooms, waiting areas, and other patient amenities. The renovation will provide infrastructure upgrades, including a sprinkler system installation on floors that were not part of the Phase I modernization, and renovation of floors three through five of the R. Waverley Smith Pavilion. Phase I of the modernization commenced in 2009 and was completed in 2012.

The scope of the previously approved John Sealy Hospital Facade Replacement project addresses the removal of the existing problematic brick facade, repairs to the substrate, a new waterproofing system, and recladding with new brick veneer and potentially other façade materials that will visually connect the John Sealy Hospital to the adjacent health care buildings. The initial project cost was based on reusing the existing window system assemblies. However, after detailed engineering analysis, this option was not found to be feasible, and the increase in cost is a result of a new curtain wall system and creation of a more efficient floor plate for the patient units by extending the structural slab. The John Sealy Hospital Facade Replacement project will be removed from the CIP.

701-937 Academic Extension Building Renovation

The University of Texas Health Science Center at Houston

Individual Project Summary

Project Description

This project will renovate the 160,000 gross square foot Texas Medical Center Library building. The building contains the Jesse H. Jones Library, which is the medical library used by the Medical School. The library will be located on the first floor of the facility while the University will occupy the remaining three floors of office and support space. This project will replace outdated mechanical, electrical, and plumbing systems. The interior of the library and the upper floors will be updated as well.

701-950 Renovation and Modernization of Educational and Research Facilities

The University of Texas Health Science Center at Houston

Individual Project Summary

Project Description

This project will renovate and modernize several critical facilities on campus encompassing over 1.6 million gross square feet of space. Where needed, the project will build out small amounts of swing space within the existing buildings' footprints to help reduce the impact of the renovations on ongoing educational and research activities. The proposed upgrades are important elements in the university's master plan, and will ensure efficient functionality of these facilities in their crucial roles of supporting teaching and research. A recent facility audit identified significant renovation and modernization needs in these facilities which were all built in the 1970's. Design development plans and authorization of expenditure of funding will be presented to the Chancellor for approval at a later date.

The University of Texas Health Science Center at San Antonio

Individual Project Summary

Project Description

The Barshop Institute for Longevity and Aging Studies, currently located at the Texas Research Park, will be relocated to the Greehey Academic and Research Campus. The Institute supports four basic models of aging research: cellular aging, invertebrate aging, transgenic models of aging, and human genetics of aging. The primary spaces within the new facility will include research laboratories, computational research facilities, research support areas, a vivarium, and administrative and building support facilities. Included in the project will be a bridge connecting the building to the South Texas Research Facility, located across the street.

402-951 Facilities Renewal and Renovation

The University of Texas Health Science Center at San Antonio

Individual Project Summary

Project Description

This project will renovate some of the older facilities on the main campus and provide upgrades to create 21st century classrooms and media-rich shared learning environments. UTHSC-SA will modernize teaching and research space and equipment, including major campus infrastructure and the core computing center to accommodate new curricula and to attract and retain new scientists. Over 1.3 million square feet, approximately 30% of UTHSC-SA's space is 35 years old or older. It is necessary to make a significant investment in these existing facilities, by replacing building systems such as mechanical, electrical, plumbing, medical gases, security, and life safety in order to repurpose the space and improve its functionality for future use. Design development plans and authorization of expenditure of funding will be presented to the Chancellor for approval at a later date.

703-1175 Renovate Head and Neck Center - Main Building - Floor 10

The University of Texas M. D. Anderson Cancer Center

Individual Project Summary

Project Description

Renovate Floor 10 of Main Building of approximately 30,000 GSF of clinical space to include the relocation of the sterile processing function, expansion of audiology space and centralization of the patient waiting, check-in/out areas.

703-1186 Proton Therapy Center No. 2

The University of Texas M. D. Anderson Cancer Center

Individual Project Summary

Project Description

Proton Therapy Center No. 2 (PTC2) is to be constructed south of the existing Proton Therapy Center (PTC1), which is located at 1840 Old Spanish Trail, Houston, Harris County, Texas, at the southwest corner of the intersection of Old Spanish Trail and Bertner Avenue. The scope of the PTC2 project includes final review and confirmation of the program and design, along with construction and activation of the facility. PTC2 will be approximately 110,000 gross square feet, will include treatment, exam, consult, office and amenity space, and will be adjacent to PTC1. A service driveway will separate the facilities at street level and an enclosed pedestrian walkway will connect the facilities on Floor 2.

703-625 Sheikh Zayed Bin Sultan Al Nahyan Building for Personalized Cancer Care

The University of Texas M. D. Anderson Cancer Center

Individual Project Summary

Project Description

(Formerly Basic Sciences Research Building Two) This project consists of an approximately 636,000 GSF research building constructed on U. T. M. D. Anderson's main campus. The facility includes two research laboratory wings designed with an exterior public corridor that maximizes the flexibility to meet new and evolving technologies and will be joined with two adjacent office wings by a central collaboration core space in the middle. The facility includes clinical laboratories, translational and basic science research laboratory space, clinical programs, and other supporting space, such as equipment support areas, offices, and conferencing facilities to integrate the delivery of basic and clinical research in support of personalized cancer care. This increase in funding for this existing CIP project will allow U. T. M. D. Anderson to finish-out all interior space that has been shelled, with the exception of approximately 13,800 GSF on the second floor of the northwest tower.

703-711 The Pavilion

The University of Texas M. D. Anderson Cancer Center

Individual Project Summary

Project Description

(formerly Alkek Surgical and Imaging Expansion) The Pavilion is an eight-story extension of the existing Albert B. and Margaret M. Alkek Hospital that will provide immediate adjacency to existing surgical services on levels 5 and 7 and imaging services on level 3. To align with the existing Alkek Hospital floors, the new structure will include interstitial floors at levels 4 and 6 to support the distribution of utilities throughout the facility, as well as a mechanical room on level 8. The project will provide covered drop-off and circulation for patients and visitors entering the Alkek or Lutheran Hospitals. The inclusion of a basement level will facilitate the expansion of sterile processing and Preoperative Clean Supply to facilitate the growth of the operating rooms. The expansion will be designed to accommodate the structural requirements of a future bed tower to better position the institution to replace the Lutheran Pavilion when it reaches the end of its effective life. The project will include space for 11 new operating rooms, with finish-out of six operating rooms on level 5 and shell space for five operating rooms on level 7 to be completed as required by patient demand.

The increase in total project cost is requested to allow M. D. Anderson Cancer Center to combine several additional planned projects with the scope of this project. The added scope of work will renovate the existing hospital Main Building on Levels 5, 3, and the basement to align support services commensurate with the services being provided. Also included will be; Post-Anesthesia Care Unit beds; waiting space and equipment storage; relocation and expansion of staff support areas; reconfiguration of the existing generators that provide emergency power to the Alkek Hospital and the Clinical Research Building; and the procurement of major medical equipment associated with the operating rooms of The Pavilion and renovations on levels 5 and 3 of the Main Building.

703-956 M. D. Anderson - West Houston

The University of Texas M. D. Anderson Cancer Center

Individual Project Summary

Project Description

The project will provide outpatient oncology services to adult patients with solid tumor cancer diagnoses and low to medium acuity needs. Services provided will be in line with that of a comprehensive cancer center including, but not limited to, radiation oncology, medical oncology services, infusion therapy services, surgical oncology, diagnostic imaging, and other related procedure-based services. The project will replace existing leases at M. D. Anderson Cancer Center located in Katy and the West Houston Imaging Center facilities and will serve patients west of greater Houston metropolitan area. The scope of the project includes the programming, design, construction, and activation of the West Houston ambulatory clinical facility, which was initially expected to be an approximately 175,000 gross square foot (GSF) building. Upon completing the programming phase, M. D. Anderson Cancer Center has determined the facility will need to be approximately 260,000 GSF in order to best meet the institution's needs. The decision to increase the size of the West Houston facility stems from a close examination of demographic data as it relates to projected patient volumes and a strategic decision to enhance the patient experience by making certain services, traditionally only available at the Texas Medical Center (TMC) campus, more readily available at other Houston area locations. Making these services more readily available will provide patients more options when deciding where to be treated and will aid in deferring the expansion of outpatient facilities within the TMC campus. The increase in the size of the West Houston facility will position the institution to serve those patients who choose to be treated at that location rather than the TMC campus. Additionally \$41,675,000 of major medical equipment will be funded outside of the project.

703-XX4 Alkek Expansion - Renovations to Existing Facility

The University of Texas M. D. Anderson Cancer Center

Individual Project Summary

Project Description

The Alkek Expansion ? Renovations to Existing Facilities project originally included renovations to certain areas within the Alkek Hospital building, specifically Floors 1, 3, 5, 7, 9, 10, 11 and 12. Due to changes in the implementation strategy, much of this work no longer needs to be completed as part of this project. The scope of the project has been adjusted to include renovations on Floors 7, 10 and 11. The scope of work includes renovating these floors to upgrade the finishes and to improve the infrastructure to facilitate the use of technologies consistent with those being used for patient care on the upper floors that were recently constructed under the Alkek Expansion project. Along with the reduction in project scope, the estimated total project cost has been reduced from \$68 million to \$22 million. To minimize the impact on patient care activities, it is expected that these renovations will be completed on Floors 10 and 11 during times when the floors are scheduled to be vacant. Renovations on Floor 7 (Intensive Care Unit) are to be completed while the floor remains in service. However the renovations will be completed with one ICU pod closed at time to facilitate the needed renovations.

801-952 Facility Renovation for Physician Residents Training

The University of Texas Health Science Center at Tyler

Individual Project Summary

Project Description

This project will renovate approximately 43,023 gross square feet of existing space to improve teaching spaces required to maintain accreditation for physician residency programs. UTHSC-T recently entered into a partnership with the Department of State Health Services to significantly increase capacity in our state's mental health system. The additional beds have had, and will continue to have, a dramatic impact on the ability to provide adequate physical space to train physician residents. Renovations will allow UTHSC-T to continue operations of the new mental health units and maintain accreditation for physician residency programs, which have specific space requirements for resident training. Design development plans and authorization of expenditure of funding will be presented to the President for approval at a later date.
